SUMMARY

B.E. Computer Science & Engineering (Information Security) graduate with hands-on, lab-validated experience in **SIEM monitoring, network traffic analysis, and threat detection** mapped to MITRE ATT&CK. Comfortable with Splunk, Wazuh, Wireshark, Nmap, and Kali Linux from independent and academic security projects. Seeking an entry-level SOC Analyst (L1) or Cybersecurity Analyst role to apply detection, triage, and incident-response skills in a live SOC environment. Based in Bareilly; open to relocating to Bengaluru from January 2027.

TECHNICAL SKILLS

SIEM & Monitoring:	Splunk, Wazuh, Snort (IDS/IPS), Log Analysis
Security Testing:	Nmap, Wireshark, Metasploit, Burp Suite, Kali Linux, VAPT
Frameworks & Standards:	MITRE ATT&CK, NIST IR Framework, OWASP Top-10, CVE/CVSS Analysis
Core Domains:	Incident Response, Threat Detection & Intel, Vulnerability Assessment, Digital Forensics, Malware Analysis, Network Security
Programming & Platforms:	Python (security scripting), C++, Bash, Linux, Git/GitHub

PROJECTS

SentinelAI — Insider Threat Detection Platform *Python, FastAPI, scikit-learn*

- Built a real-time insider-threat detection system flagging anomalous user behavior and C2-style traffic using behavioral analytics; reached **92–95% detection accuracy** on test scenarios.
- Engineered a user-behavior baseline model (login patterns, access frequency, data-transfer volume) to separate genuine anomalies from routine activity, cutting false-positive alert volume by **~20%**.
- Mapped detected behaviors to MITRE ATT&CK techniques and modeled Splunk-style SIEM triage workflows; exposed the engine via a FastAPI backend and open-sourced the codebase on GitHub.

ML-Based Encrypted Traffic Threat Detection *Python, scikit-learn, Wireshark*

- Built a classification pipeline to flag DDoS, port scanning, and C2 communication inside encrypted TLS traffic without decrypting payloads, using traffic-flow features (timing, size, frequency).
- Processed large-scale PCAP datasets in Wireshark/Python to extract flow-level statistical features, then benchmarked Random Forest, SVM, and Gradient Boosting models to reach **92–95% accuracy**.
- Mapped identified attack patterns to MITRE ATT&CK techniques to support SOC-style reporting and reduce analyst alert fatigue.

Dynamic 5G Network Slicing Security Analysis *Kali Linux, VMware, 3GPP*

- Simulated 3GPP-based 5G network slices (eMBB, URLLC, mMTC) in a virtualized lab to study slice-level attack surfaces and isolation boundaries.
- Ran Nmap scans and vulnerability assessments against simulated network nodes; identified risks including resource exhaustion, impersonation attacks, and slice hijacking.
- Investigated findings using the NIST Incident Response Framework and proposed mitigation strategies aligned with 3GPP and 5G security standards, documented in a formal report.

EDUCATION

B.E., Computer Science & Engineering (Information Security) *Aug 2022 – Jul 2026*

Chandigarh University, Gharuan, Mohali, Punjab | CGPA: 7.39 / 10

Relevant coursework: Security Intelligence, Digital Forensics, Penetration Testing & Ethical Hacking, System & Network Security, Incident Response & Threat Hunting, Malware Analysis

CERTIFICATIONS

Security Intelligence Engineer — IBM *Nov 2024*
SIEM fundamentals, log source integration, correlation rules, and use-case building for threat detection.

Cybersecurity Operations Fundamentals (CyberOps Associate) — Cisco *Nov 2025*
SOC workflows, network security monitoring, and incident-response lifecycle.

Cloud Security — IBM *Nov 2025*
Cloud architecture risks, identity & access management, and cloud security controls.

Google Cybersecurity Professional Certificate — Google *Nov 2023*
Network defense, Python for security automation, hands-on SIEM/IDS labs.

Cyber Job Simulation — Deloitte Australia, via Forage *Apr 2026*
Phishing-email triage, breach analysis, and client-facing security recommendations.

ACHIEVEMENTS & EXTRACURRICULAR

- **Founder, AegisSec** — developer-focused security scanner performing static analysis, secrets detection, and dependency-vulnerability scanning for codebases; in active development.
- Completed **20+ TryHackMe rooms** across the SOC Level 1 and DFIR learning paths, covering log analysis, phishing investigation, and forensics fundamentals.
- **Hackathon Finalist** — selected for Day 2 prototype development at Stack Sprint 1.0 among 200+ participants.
